HITESH CHAUDHARI

Full-Stack Senior Software Engineer | Tech Lead | Forward Deployed Engineer

Bengaluru, India | chaudharihitesh57@gmail.com | +91 8268946878 | linkedin.com/in/eng-hitesh-chaudhari | stackbyhitesh.github.io

PROFESSIONAL SUMMARY

Full-stack Senior Software Engineer, Tech Lead, and Forward Deployed Engineer with ~8 years architecting and delivering enterprise-scale web and mobile applications for 110M+ users, building end-to-end across React, Angular, and Next.js frontends styled with Tailwind CSS and Material UI, Progressive Web Apps (PWA), and Node.js backends. Proven leader of a 6-engineer team across architecture decisions, sprint planning, and delivery, with a track record translating complex business and customer requirements into working production solutions for global enterprise customers. Deep specialization in performance engineering — multi-layer caching, query optimization, and high-volume rendering — paired with hands-on system integration (Stripe, Razorpay, Bajaj Pay, SSO) in regulated fintech environments, and early adoption of AI-assisted development, building custom coding agents, RAG-based tooling, and prompt-engineered skills to speed up delivery.

CORE SKILLS

Frontend: TypeScript, JavaScript (ES6+), React, Angular, Next.js, Ionic, Progressive Web Apps (PWA), RxJS, NgRx, Redux Toolkit, React Hooks, Microfrontend / Module Federation, HTML5, CSS3

UI Frameworks & Styling: Tailwind CSS, Material UI (MUI), Angular Material, Responsive & Component-Driven Design, Design Systems

Backend: Node.js, Java, REST APIs, GraphQL, Microservices Architecture

AI-Assisted Development: Large Language Models (LLM), GitHub Copilot (Agent Mode), Custom Coding Agents, Custom Skills / Instructions for Codegen, OpenAI API, Anthropic API, Prompt Engineering, Retrieval-Augmented Generation (RAG), Vector Embeddings, Semantic Search, Fine-tuning, Context Window Optimization, Token Optimization, Agentic Workflows, LangChain, LlamaIndex, Vector DB

Delivery & Collaboration: Requirements Translation, Customer-Facing Delivery, Cross-Functional Collaboration, Rapid Prototyping, System Integration, Production Support

Architecture & Design: System Design, Scalable Architecture, Design Patterns, Caching Strategies, Database Indexing and Query Optimization, Performance Optimization

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD Pipelines

Payments & Security: OAuth 2.0, JWT, SSO, Stripe, Razorpay, Bajaj Pay SDK

Testing & Quality: Jasmine, Karma, JUnit, Cypress, Unit Testing (85%+ coverage), Test-Driven Development (TDD), SonarQube

Tools & Practices: Git, Postman, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer | OpenText **November 2025 – Present**

- **Performance ownership:** Own frontend performance for a high-volume enterprise data platform, implementing virtual scroll, lazy loading, and debounce-based input handling to render 35K+ records smoothly, eliminating a page-freezing issue so the UI no longer blocks under heavy load.
- **Caching architecture:** Designed a multi-layer caching strategy (frontend and Redis) that cut average API response time by up to 18% — the largest single performance gain delivered across recent roles.
- **UI modernization:** Rebuilt key interface components using Material UI (MUI) and Tailwind CSS to standardize design patterns, improve accessibility, and accelerate delivery of new screens.
- **AI coding agent:** Built a custom AI coding agent in VS Code using GitHub Copilot's Agent mode, authoring custom skills so generated code follows the team's architecture and coding conventions, speeding up feature development and improving code consistency.
- **RAG tooling:** Architected a RAG-based code assistant for internal tooling, using prompt engineering to reduce boilerplate development time by 25%.
- **Platform engineering:** Enhance and maintain REST APIs and microservices in Node.js and Java for global enterprise customers, focused on scalability, reliability, and maintainability.
- **Quality & reliability:** Maintain 85%+ unit test coverage and existing CI/CD pipelines; drive code reviews and resolve production issues to uphold application reliability; follow test-driven development (TDD).

Senior Software Engineer (Tech Lead) | Bajaj Finserv **March 2023 – November 2025**

- **Technical leadership:** Led and mentored a team of 6 engineers as Tech Lead, owning full-stack architecture decisions (frontend frameworks, including Progressive Web Apps, with backend services), sprint planning, and delivery for modules used by 110M+ users.
- **Delivery track record:** Delivered 6 business-critical, full-stack modules end-to-end — frontend UIs backed by backend services — contributing to 20+ production releases with high reliability and minimal defects.

- **Internal tooling:** Designed and built an internal Engineering CRM from scratch on a Node.js backend with a frontend UI, covering sprint tracking, workflow automation, and reporting; adopted team-wide to streamline delivery visibility.
- **Performance tuning:** Optimized database indexing and query performance alongside frontend/Redis caching, reducing redundant API and database calls and cutting average API response time by up to 14%.
- **Payments & security:** Integrated Bajaj Pay SDK into backend services for secure payment processing and implemented SSO-based authentication across core modules.
- **Engineering practices:** Built and maintained CI/CD pipelines and established engineering best practices through structured code reviews and mentoring.

Senior Software Engineer | Chetu India Pvt. Limited **October 2021 – March 2023**

- **System design:** Designed scalable, microservices-based application architecture using Node.js for enterprise solutions, with a strong focus on reliability and system design.
- **Mobile engineering:** Built an offline-first hybrid mobile application using Ionic (cross-platform iOS/Android) with a Node.js backend, local data persistence, and background sync, ensuring a seamless experience across varying network conditions.
- **Payments integration:** Integrated Stripe payment gateway into Node.js backend services with OAuth 2.0 and JWT-based authentication for secure online billing.
- **Performance validation:** Conducted load testing and performance tuning on Node.js APIs to validate application stability under high concurrent load, contributing to an 11% reduction in average API response time while maintaining 85%+ unit test coverage.

Software Developer | VPGP Pvt. Limited (EasyNow) **April 2019 – June 2021**

- **Full-stack ownership:** Designed and built a full-stack CRM application from scratch — Node.js backend with a frontend UI — with role-based access control (RBAC) to automate customer workflows.
- **Product features:** Built a user portfolio module and subscription-based login/access control, enabling tiered feature access based on the customer's plan.
- **Payments & optimization:** Integrated Razorpay payment gateway into the Node.js backend for secure online billing and subscription payments; optimized database performance through indexing and query tuning.
- **UI/UX:** Designed responsive user interfaces and interactive dashboards; built backend REST APIs in Node.js with JWT-based authentication and automated workflows to reduce manual and bulk-processing effort.

Junior Software Developer | Fleet Solution **September 2018 – April 2019**

- Developed responsive web applications with cross-browser compatibility and accessibility best practices.
- Collaborated with stakeholders to translate business requirements into scalable software solutions across the full feature lifecycle.

EDUCATION

Master of Science in Information Technology — University of Mumbai | 2019 – 2021
Bachelor of Science in Information Technology — Patkar College, University of Mumbai | 2015 – 2018

CERTIFICATIONS & RECOGNITION

- Recipient of Hero's, Prodigy, Super Achiever, and Tech Titan awards for engineering excellence.
